

Spotlight on NDA Webinar

#MadeByMarick

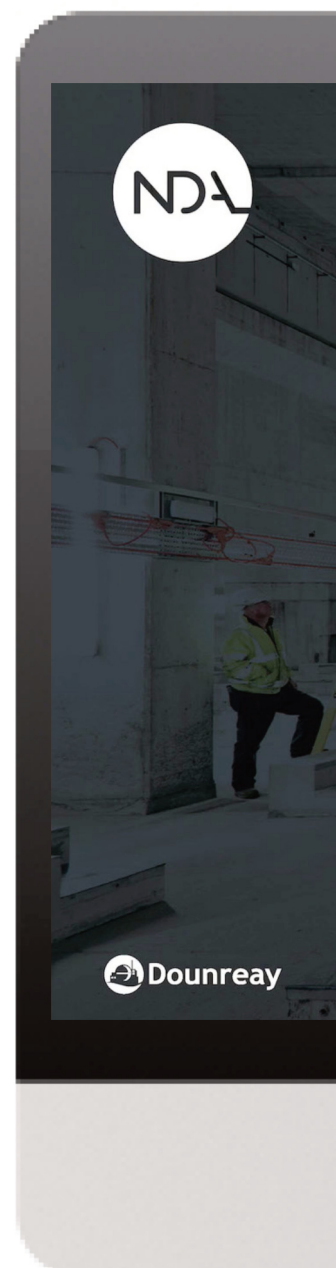

The drive to reduce the cost of decommissioning brings the need for new ideas and innovation, as set out in the Nuclear Sector Deal.

Working closely with the industry and the supply chain will be crucial in achieving this. As part of the NDA Integrated Waste Management Programme, they're looking to apply new thinking right across the waste lifecycle to help them avoid using unnecessary resources for treatment, packaging, and storage of radioactive waste. To do this, they're introducing an Innovation Partnership approach, initially for asbestos management, followed by other priority areas of metal treatments and characterisation.

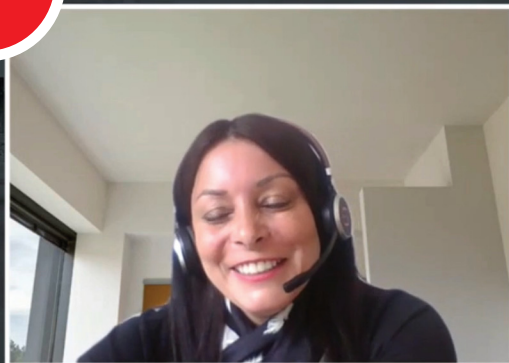

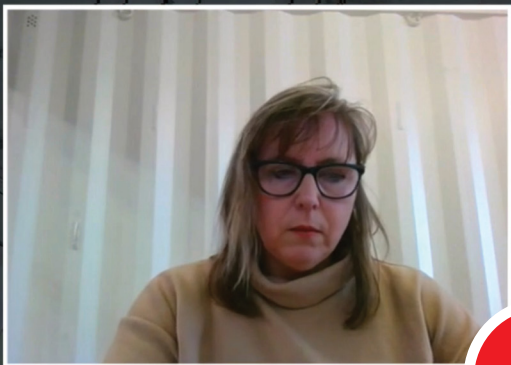

Watch the webinar to learn more about:

- **Why the NDA are taking this route**
- **Benefits of the NDA's Innovation Partnership Approach**
- **What's required**
- **How you can get involved**
